Experience

01/2019 – 01/2023

Node.js back-end developer at ApiTree
At ApiTree, we created and successfully released a complete new web portal for the energy company Eon and their customers. As a back-end developer, these are some of the technologies I was using on this project:
TypeScript, GraphQL for the API and front/back-end communication, MongoDB, Redis, Git, Kubernetes in Azure, Kibana and Elastic search.

11/2014 – 12/2018

ERP Product support analyst at Infor and CDK
As a product support analyst at a major global company in the finance department team, I analyzed the technical issues of customers through internal reproductions and trace file analysis.
